<u>STEP IT Academy</u>	Front-End Development
2019 - 2020	
Kyiv National Economic University	Finance and credit
2010 - 2015	

About me

I am 27 years old. Professional experience - over a year. I work as a front-end developer at [SoftLogic](#) (Nikolaev).

My main commercial project during my work in the company is the [Taxi UA](#) mobile application. This application is a platform for taxi drivers from all over Ukraine, where are the discounts on fuel, insurance and other services required by taxi drivers. For the application, we have developed a unique validation system, thanks to which only taxi drivers can use it.

All the client side and the logic of the application was developed and written by me using Vue.js framework and Apache Cordova mobile development environment. While working on a project coordination with IT departments of such large companies as WOG, Shell and Okko is carried out. Thousands of taxi drivers from different cities of Ukraine use this application every day. It has over 10 thousand downloads in Google Play and highly rated by users.

Also, I have written several web modules for integration into mobile applications of taxi services. While working in the company, I regularly had to deal with non-standard tasks and technologies and find ways to implement them in a limited time.

At this time, my main responsibilities are application support, implementation of new functionality and work on new projects.

Prior to joining the company, I was engaged in intensive self-training for about a year. Also, during this time I finished courses on front-end development at STEP Computer Academy. I have great interest in this area and I constantly try to develop my skills and learn new technologies in my free time. At the moment I am intensively studying the Flutter framework, and also raising my English level.
